Education

Vinayaka Mission's Engineering College

B.E – Artificial Intelligence and Data Science

Sep 2022 – 2026

Salem, Tamil Nadu

Relevant Coursework

- Data Analytics
- Data Science
- Machine Learning
- Data Engineering
- Data Visualization
- Business Intelligence
- Big Data Analytics
- Artificial Intelligence

Experience

PySpiders Institute

Data Science Intern

Dec 2025 – Present

Bengaluru, Karnataka

- Developed hands-on experience in Data Analytics, Machine Learning, and Data Preprocessing by working on real-world datasets and end-to-end projects.
- Built and evaluated machine learning models using Python, SQL, Pandas, NumPy, Scikit-learn, imbalanced-learn, XGBoost, and applied feature engineering, SMOTE, Pipeline, ColumnTransformer, and GridSearchCV for model optimization.
- Created interactive dashboards and business reports using Power BI and Excel, while strengthening skills in ETL, PySpark, Hadoop, Git, and data-driven problem solving.

Novi Tech

Machine Learning Intern

July 2025

Coimbatore, Tamil Nadu

- Developed practical expertise in machine learning through predictive analytics and model development projects.
- Refined skills in feature engineering, model training, hyperparameter tuning, and performance evaluation.
- Applied classification and regression algorithms to build accurate and reliable predictive models.

Projects

Intelligent Video Surveillance | *Computer Vision*

- Developed a Credit Card Fraud Detection model using XGBoost, SMOTE, ColumnTransformer, and Feature Engineering techniques to identify fraudulent transactions in highly imbalanced datasets.
- Applied GridSearchCV for hyperparameter tuning and utilized Python, Pandas, NumPy, Scikit-learn, and EDA for data preprocessing, model evaluation, and performance optimization. [🔗 GitHub](#)

Credit Card Fraud Detection | *Machine Learning*

- Developed a Credit Card Fraud Detection model using XGBoost, SMOTE, ColumnTransformer, and Feature Engineering techniques to identify fraudulent transactions in highly imbalanced datasets.
- Applied GridSearchCV for hyperparameter tuning and utilized Python, Pandas, NumPy, Scikit-learn, and EDA for data preprocessing, model evaluation, and performance optimization. [🔗 GitHub](#)

Crypto Currency Market Analysis | *Python*

- Utilized Python, Pandas, NumPy, Matplotlib, Seaborn, Data Cleaning, Data Transformation, Exploratory Data Analysis (EDA), and Data Visualization techniques to analyze cryptocurrency market data.
- Analyzed price trends, trading volume, monthly and yearly performance, correlations, and cryptocurrency behavior to generate actionable insights for market analysis and decision-making. [🔗 GitHub](#)

Zepto Sales Analysis Dashboard | *Microsoft Power BI*

- Utilized Power BI, Power Query, DAX, Data Modeling, Data Cleaning, Data Transformation, KPI Analysis, Business Intelligence, and Data Visualization techniques to build an interactive sales analytics dashboard.
- Analyzed sales performance, customer purchasing behavior, product trends, revenue growth, and top-performing categories to generate actionable business insights and support data-driven decision-making. [🔗 GitHub](#)

Technical Skills

Languages: Python, SQL((Oracle SQL))

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, imbalanced-learn (imblearn), CV2

Machine Learning: Linear Regression, Logistic Regression, Decision Tree, Random Forest, XGBoost, K-Nearest Neighbors (KNN), Support Vector Machine (SVM), Naive Bayes, K-Means Clustering, Isolation Forest))

Visualization: Power BI, Tableau, Microsoft Excel

Big Data: PySpark, Hadoop, HDFS, ETL, Linux Commands, Hadoop Commands **Developer Tools:** Git, GitHub, Jupyter Notebook, Google Colab, VS Code
